

	ENVIRONMENTAL PROTECTION	REGD01
		Rev. 2

Children's clothing company **MINICONF** is located in an area of particular historic and natural interest, surrounded by the Casentino Forest National Park.

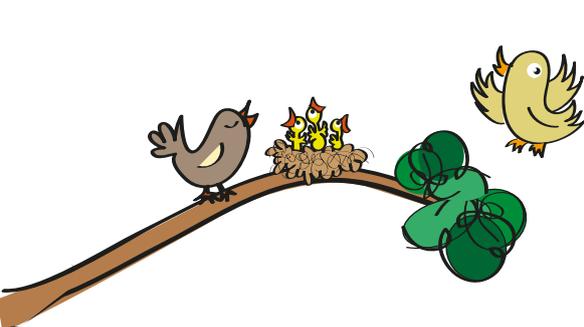

As underlined by its vision "children inspire us, values guide us", **MINICONF** is a company that is committed to supporting and promoting socially responsible behaviour, and creates collaborative relationships of the utmost trust with all those that contribute to its growth and share its values.

In particular: the focus on the design and creation of products which, where technically possible and economically sustainable, minimise their environmental impact, the stringent checks performed to verify and mitigate possible health risks to young consumers and all those that make up the supply chain, and the use of various different communication and dialogue tools focused on customers and society.

In addition, the trusting and highly collaborative relationships it has always enjoyed with its employees and collaborators mark **MINICONF** out as a company that operates on the market in a responsible and transparent way.

To satisfy these principles **MINICONF** pledges to:

- share this document within the organisation and with the relevant interested parties,
- ensure that its activities comply with the laws in force and with any regulations and guidelines that the company decides to adopt,
- maintain an effective Environmental Management System according to the requirements of the **UNI EN ISO 14001: 2015** standard, so as to continuously improve its environmental performances in response to the context in which it operates and the expectations of all relevant interested parties,
- ensure that the Management System is implemented and active at all levels of the organisation and supported by periodic awareness and training activities,
- design and create products that minimise their environmental impact throughout their life cycle,
- take all organisational, operational and technological steps to prevent the pollution of water, air and soil, as well as pollution due to other environmental impact factors, and to minimise the production of waste, encouraging its recycling.

The Management
